euca-add-keypair..... 3

euca-add-keypair

Creates a new keypair and then prints the private half of the keypair. Eucalyptus does not store this information. We recommend that you write the output to a file.

Syntax

```
euca-add-keypair [-a, --access-key <access_key> ][-s, --secret-key
<secret_key>
][--config <config_path> ][--debug][--debugger][-h,
--help][--region <region_name> ][-U, --url <url> ][--version
][--euca-auth] keypair_name
```

Parameters

Parameter	Description	Required?
keypair_name	Unique name for a keypair to be created.	Yes

Response Elements

Example Request

```
euca-add-keypair mykey
```

Example Response

```
KEYPAIR mykey
